

# THREE-PHASE MOTORS

## TERMINAL BOX

The location of the terminal box in standard design is on top; on the right or on the left are possible.

*Motors 71-160 frame size have removable feet for easy change of terminal box position*

For motors with mountings IM B6, IM B7, IM B8, IM V5, IM V6 the location of the terminal box is related to an IM B3 mounting.

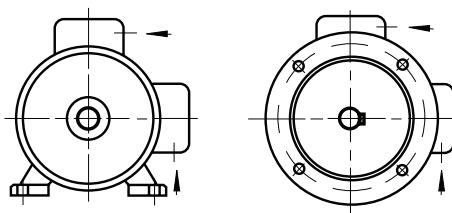

The position of the entry openings can be adjusted to suit the existing connection facilities by turning through 90°. Should special accessories be used (temperature detectors, anti-condensation heating, etc.) please enquire.

For motors in standard design, the cable gland does not belong to our scope of delivery.

*For plastic terminal boxes, only plastic glands may be used (shock protection).*

When using screened leads, a metal terminal box is required.

Direction of cable entries

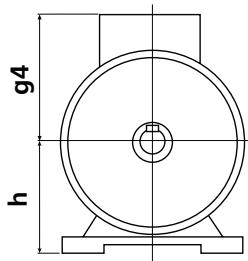

Frame size	Degree of protection	Thread for cable entry		Max. cable section mm <sup>2</sup>	Terminal thread	Max. external cable diam. mm

1) On frame size 56-63 the terminal box is supplied displaced towards the non-drive end

## CONNECTION DIAGRAMS

Windings of standard three-phase single speed motors can be connected either in star or delta connection.

### STAR CONNECTION

A star connection is obtained by connecting W2, U2, V2 terminals to each other and the U1, V1, W1 terminals to the mains. The phase current and voltage are:

$$I_{ph} = I_n ; U_{ph} = U_n / \sqrt{3}$$

where  $I_n$  is the line current and  $U_n$  the line voltage referred to the star connection.

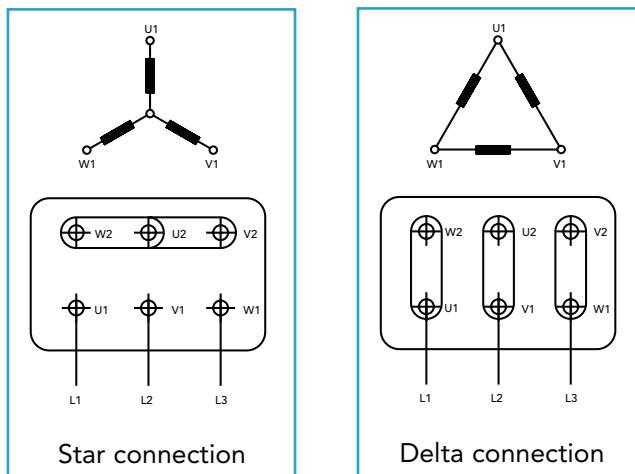

### DELTA CONNECTION

A delta connection is obtained by connecting the end of a phase to the beginning of the next phase.

The phase current  $I_{ph}$  and the phase voltage  $U_{ph}$  are:

$$I_{ph} = I_n / \sqrt{3} ; U_{ph} = U_n$$

where  $I_n$  and  $U_n$  are referred to the delta connection.

### STAR-DELTA STARTING

Star-delta starting allows a peak current reduction. It can be used only when the reduced starting torque obtained is higher than the resistant torque. Actually, it should be noted that the torque of an induction squirrel-cage motor is directly proportional to the square of the voltage. Motors whose rated voltage with delta connection corresponds to the mains voltage, can be started with the star-delta method.

All motors can be supplied with windings designed for star-delta starting (for example: 400 V  $\Delta$  / 690 V Y).

## TWO SPEED MOTORS

Standard pole-changing motors are designed for single voltage and direct-on-line starting.

When the ratio between the two speeds is from 1 to 2, the standard motors have one single winding (Dahlander connection). For the other speeds, the motors have two separate windings.

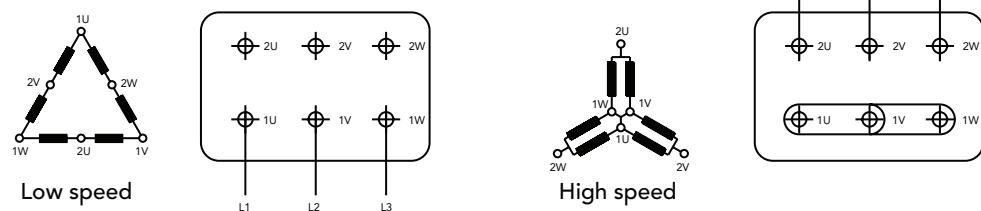

**AM/AMV - two separate windings**

Low speed

High speed

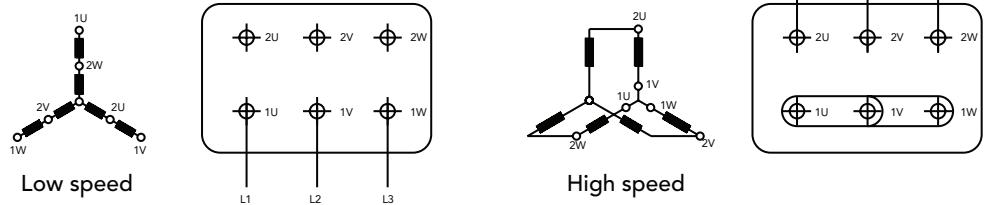

**AM - Dahlander connection Δ/YY**

Low speed

High speed

**AMV - Dahlander connection Y/YY**

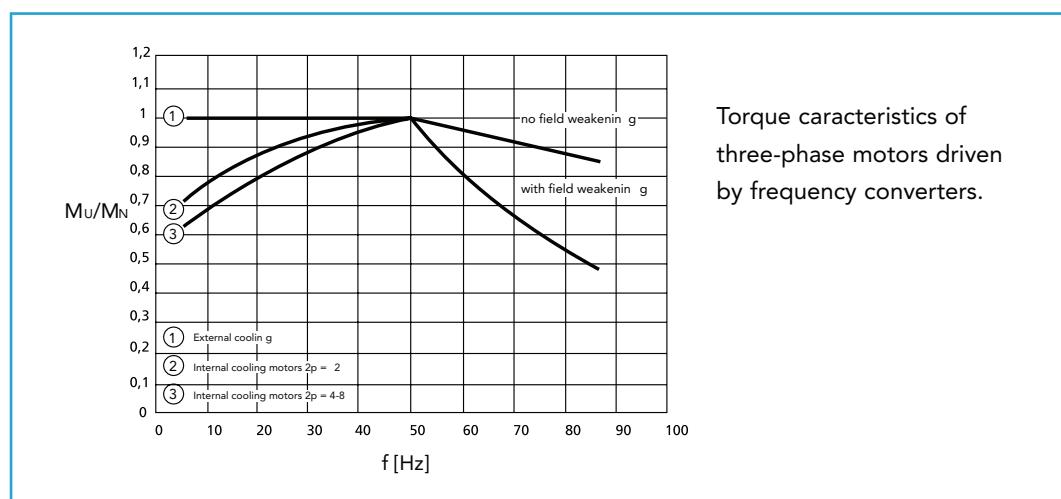

Low speed

High speed

Motors frame sizes 90 upwards in standard design are suitable for operation on static frequency converters, taking into account the following remarks:

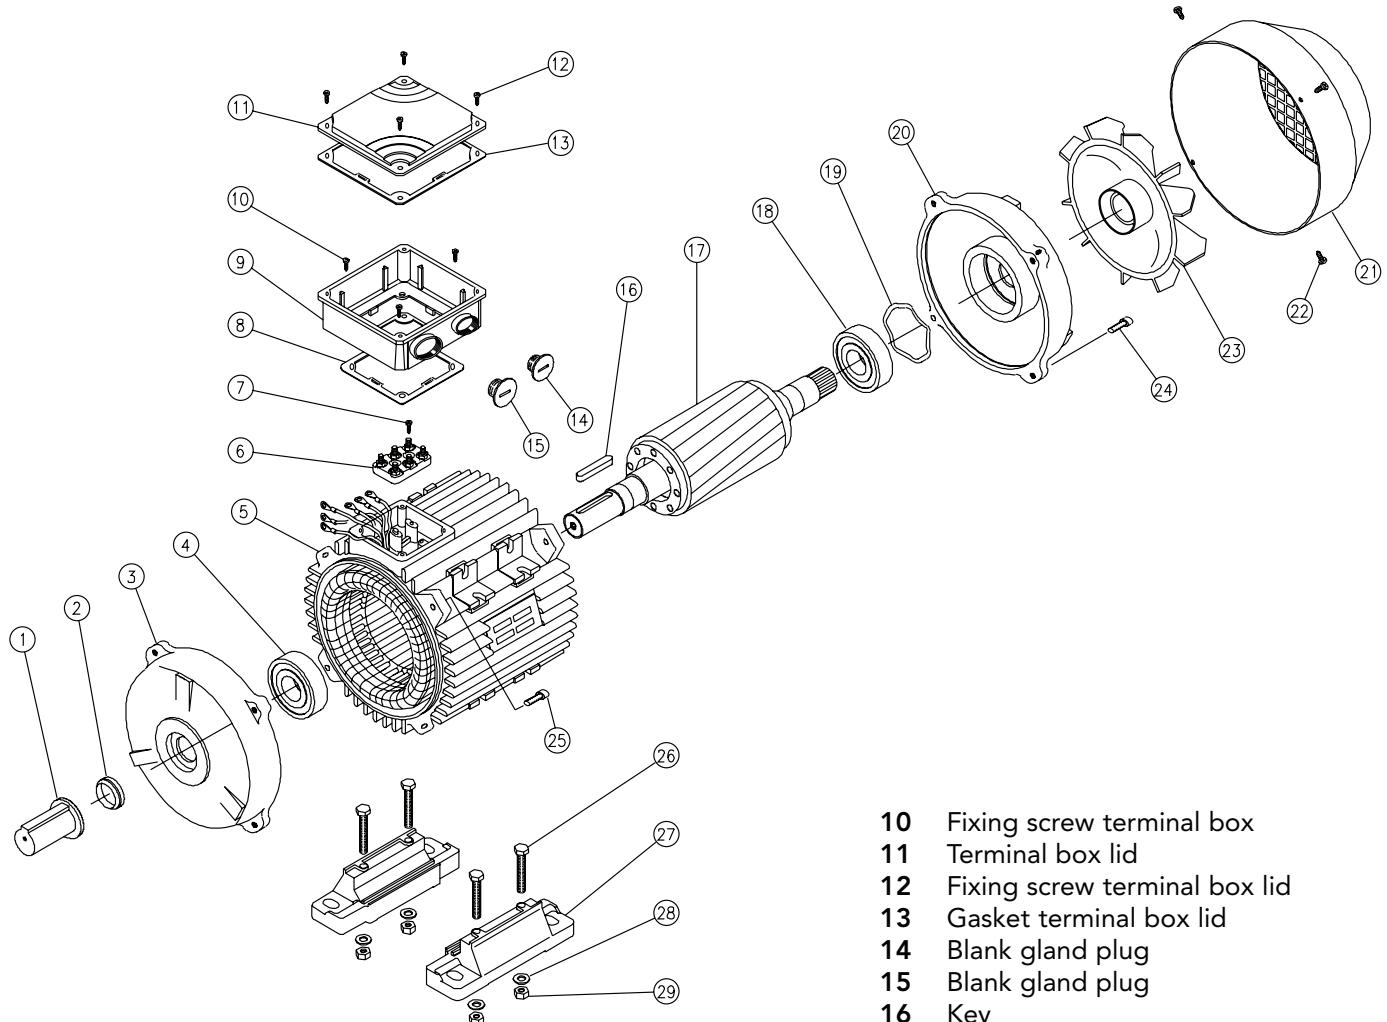

- Maximum converter output voltage 500V at peak voltages  $\hat{U} \leq 1460V$  and  $dU/dt \leq 13\text{ kV/us}$ . For higher converter output voltages or stresses, a special insulation is required.
- With square characteristic of the load torque, motors can be driven with their rated torque.
- For constant torque, the rated torque of motors with internal cooling must be reduced due to reduced cooling air inlet. Depending on the control range, the use of an external fan would be advisable.
- The motors frame sizes 90 – 112 are suitable for a maximum output frequency of the converter of 60 Hz (e.g. applications with square torque, control range 1:10, such as pumps and fans). For higher frequencies, a special range is available on request. From frame size 132 upwards, motors designed Δ/Y 230/400 V, 50 Hz can be operated in delta with a maximum frequency of 87 Hz (observe mechanical limit speed).
- The motors frame size 56 – 80 can be operated on single-phase converters up to maximum 60 Hz. Special range for operation on three-phase converters with output voltage  $\geq 400\text{ V}$  and output frequency  $> 60\text{ Hz}$  is available on request.

**Note:** 75 kW, 2 poles and up - insulated bearing are recommended when inverter fed.

## NOISE

Depending on the operating point and converter type, converter-fed motors produce between approx. 4 - 10 dB(A) higher noise values than when supplied from the mains. For motors driven with a frequency over 50 Hz, more fan noise is produced. We recommend the use of an external fan.

### PART DESCRIPTION

- 1** Shaft protection
- 2** Dust seal drive end
- 3** Endshield drive end
- 4** Bearing drive end
- 5** Stator frame
- 6** Terminal board
- 7** Fixing screw terminal board
- 8** Gasket terminal box
- 9** Terminal box

- 10** Fixing screw terminal box
- 11** Terminal box lid
- 12** Fixing screw terminal box lid
- 13** Gasket terminal box lid
- 14** Blank gland plug
- 15** Blank gland plug
- 16** Key
- 17** Rotor complete
- 18** Bearing non-drive end
- 19** Pre-load washer
- 20** Endshield non-drive end
- 21** Fan cover
- 22** Fixing screw fan cover
- 23** Fan
- 24** Fixing bolt endshield non-drive end
- 25** Fixing bolt endshield drive end
- 26** Fixing bolt motor feet
- 27** Motor feet
- 28** Fixing washer motor feet
- 29** Fixing nut motor feet

Only motors 71-160 frame size have removable feet for easy change of terminal box position

In enquires and orders for spare parts please state always:

Designation of spare part, motor type, mounting arrangement, motor serial number (Product No. when available)

Enquires and orders cannot be handled without these data.

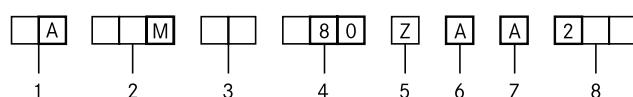

## TYPE DESIGNATION

Apart from other information, it is necessary to specify the exact type designation in all enquiries, when ordering spare parts or replacement motors or when asking for documentary information.

The type designation of our motors comprises 8 points of reference, each of which may consist of several letters and/or numerals. The meaning of each symbol can be seen from the following table. For motors not included in our standard range, special symbols may be used which are not listed here.

Ref.	Meaning point	Description of symbols used for our motors	
1	Type of motor	A	Asynchronous motor
2	Cooling	M G MFV	Surface cooled with external fan, cooling fins Surface cooled without external fan, cooling fins Surface cooled with forced ventilation, cooling fins
3	Type of motor	blank EE H HE PE PH V I	Three-phase motor, standard efficiency IE1 code Three-phase motor, high efficiency IE2 code Three-phase motor, efficiency to EPACT regulations Three-phase motor, high efficiency IE2 code 50 - 60 Hz Three-phase motor, premium efficiency IE3 code Three-phase motor, premium efficiency EISA regulations Three-phase two speed motor for driving fans Special design for three-phase motor driven with frequency converter
4	Shaft centre height	56, 63, 71, 80, 90, 100, 112, 132, 160, 180, 200, 225, 250, 280, 315	
5	Frame length	Z S M L	Mechanical dimension (short) Mechanical dimension (medium) Mechanical dimension (long)
6	Mechanical design and output value	A B ... Z	
7	Frame material	A G	Aluminium frame Cast iron frame
8	Number of poles	2 - 4/2 4 - 8/4 6 - 4/6 8 - 6/8
