

Sesame Motor Corp., A leading brand in gear technology.

MOTOR AND SPEED REDUCER

100%

Made in Taiwan

www.sesamemotor.com

Company Profile

Sesame Motor Corp., as a leading brand in Motor and gear reducer technology. "SESAME MOTOR CORP." Founded in 1990, have more than 25 years of professional motor and gearbox manufacturing and sales experience. SESAME MOTOR's 7000 square meters factory locates at Sheng Kang. Adding modern workshop facilities with the effective integration of ERP systems, purchase new processing and testing equipment; as we continuously enhance key parts' productivity we had not only expending overall productivity, shorten delivery, and ensure products' quality to achieve customer satisfaction. SESAME MOTOR products have received unanimous praise.

Quality Policy :

- "Honesty" , to provide integrity and pragmatic services
- "Creativity" , to create customer competitive advantage
- "Positivity" , positive support and responsibility
- "Innovation" , moving forward of technical innovation

Environmental Policy :

- Full participation to comply with eco-regulation
- Prevent pollution; save energy and reduce waste
- Keep improving and propagating Green Concept

Company Profile

"SESAME MOTOR" is built base on spirit of "customer satisfaction, priority service" philosophy, providing three privileges "best quality, fastest delivery, and best sale service". Our products have obtained high market share in Taiwan, that had lead "SESAME MOTOR" be a well-known brand. In addition to our official branch in Shanghai, we have agents in the United States, Germany, Denmark, Poland, UK, Turkey, Russia, Korea, Japan, China, Thailand, Malaysia and India.

"SESAME MOTOR" also has a professional R & D team and experienced production-related sectors; can provide high accuracy products for different customer needs; high-quality gear and the surrounding transmission components, develop and produce other kinds of gear; customized motor products, products with detailed-oriented, high precision, low noise, high efficiency, and good quality properties. Product development are aiming three directions "science and technology, environmental protection, and innovation". Product will be used in tool machines, industrial robots, semiconductor devices, aircraft industrial, medical and rehabilitation equipment, electric scooter, electric bike, auto storage devices, green energy-related industries, testing and food machinery, bakery equipment, packaging machinery, agricultural equipment and other sophisticated automation equipment.

Company Profile

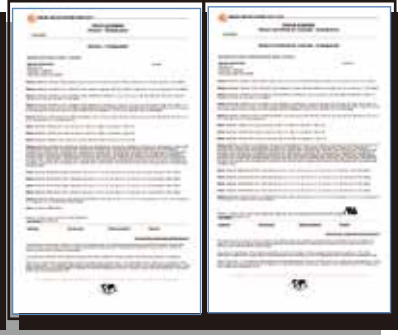

"SESAME MOTOR" has been successively obtained CE,CCC,UL, ISO9001 and ISO14001 certification and honorary awards. As we continuously, progressively for created finest quality products; with "Honesty" for providing integrity and pragmatic service; with "Creativity" given customer "Positivity" to support & responsible for the efficiency of productivity; with "Innovation" on profession and knowledge of knowhow, by these four philosophy management, we aims to become the first market trend indicators. "SESAME MOTOR" strong operating team adhere to the blue ocean strategy of entering the international market and high-tech field, to create the future more professional, better quality of sustainable management systems, establishment of "a combination of leading technology and brand reputation" for competitive advantage.

MOTOR TERM BRIEF INTRODUCTION

Rating

Motor rating is the maximum allowance based on its temperature rising and loading. The Rating is including output, voltage, frequency, current, torque, speed and other related value. It can be classified continuously and short-time rating according to temperature limitation.

Continuously & Short-time Rating

Time rating is defined via the motor works continuously with certain loading in ambient temperature 40°C and the motor temperature itself does not exceed the safe limit. Continuously rating means the motor can be operated continuously. Short-time rating means the motor can be operated within specified time interval only. Short-time rating motor with interval operation runs longer because of the thermal diffusion effects.

Rated Output

Rated output means the motor works in a defined period of time with maximum loading and the motor temperature itself does not exceed the safe limit. For example, a 10HP continuous rating motor can be used as a 12HP or 13HP motor via the short-time rating usage. Thus it is marked rated output only. The RPM and torque under rated output formulation are justified as rated RPM and rated torque. The most suitable performance of motor is available only when the motor works in rated condition.

$$\text{Output} = 1.027 \cdot N \cdot T$$

$$1\text{HP} = 746 \text{ Watt}$$

$$1.027: \text{Constant}$$

$$N: \text{Speed (RPM)}$$

$$T: \text{Torque (Kg} \cdot \text{m)}$$

Starting Torque (see graph)

The torque produced by the motor when starting is called starting torque. The motor does not work if loading is larger than the starting torque.

Maximum Torque (see graph)

The maximum torque is the most torque output of the motor under specified voltage and frequency. If the additional loading is larger than the maximum torque when the motor is running, the motor will stop immediately.

Rated Torque (see graph)

The torque produced by the motor at rated output under specified voltage and frequency is rated torque. It is also the torque at rated speed.

Rated Speed (see graph)

The measured speed of the motor at rated output.

Motor Ingress Protection Rating

Model	Rating	Explanation
Wire Type	IP22	Prevent against object diameter > 12mm such as fingers Prevent against dripping water when tilted up to 15°
Terminal Box Type	IP54	Prevent against dust and it must not enter in sufficient quantity to interfere with the satisfactory operation of the equipment. Water splashing against the enclosure from any direction.

Speed vs. Torque Graph

Synchronous Speed (see graph)

Motor pole and power frequency will determine the speed. In general the unit is revolutions per minute (rpm). The calculation formula is:

$$N_s = \frac{120 \cdot f}{P}$$

N_s : Synchronous Speed
 120 : Constant
 f : Hertz (Hz)
 P : Motor Pole

Example: A 4-pole motor at 60 Hz, its synchronous speed is 1800 rpm.

No-load Speed (see graph)

Motor speed under zero load is called no-load speed. Because of slip ratio, the speed of induction motor and reversible motor will be less than their synchronous speed (approx. 20 ~ 60 rpm less).

Slip Ratio

An indication of motor speed.

$$S = \frac{N_s - N}{N_s}$$

S : Slip Ratio
 N_s : Synchronous Speed (rpm)
 N : Designated Load Speed (rpm)

Example: If a 4-pole motor at 50 Hz pulling an object, its slip ratio is 0.1, then the motor speed is 1350 rpm.

$$N = \frac{120 \times 50}{4} (1 - 0.1) = 1500 \times 0.9 = 1350 \text{ rpm}$$

Overrun

Overrun is the additional rotation after the power is turned off. It is indicated by turns or degree.

Wiring Diagram

POWER OUTPUT CALCULATION

Belt Conveyor

$$P_g = (P_1 + P_2 + P_3) \frac{100}{\eta} \text{ [Watt]}$$

No-load :

$$P_1 = 9.8 \mu w L \text{ [Watt]}$$

Horizontal :

$$P_2 = \frac{\mu Q L}{367} \text{ [Watt]}$$

Vertical :

$$P_3 = \pm \frac{QH}{367} \text{ [Watt]}$$

L : Length of conveyor(m)
W : Weight of belt in unit length(kgf/m)
 μ : Friction coefficient
V : Belt speed(m/sec)
Q : Quantity(kgf/h)
 η : Efficiency(%)
H : Height difference between two ends of belt(m)

Winding Up a Load

$$P_g = \frac{wv}{6.12} \cdot \frac{100}{\eta} \text{ [Watt]}$$

W : Weight of belt in unit length(kgf/m)
V : Belt speed(m/sec)
 η : Efficiency(%)

Horizontal Movement

$$P_g = \frac{WV}{6.12} \text{ [Watt]}$$

W : Weight of belt in unit length(kgf/m)
 μ : Friction coefficient
V : Belt speed(m/sec)

Driving of an Inertia Object

$$P_g = 1.027 NT \text{ [Watt]}$$

$$T \approx \frac{GD^2}{375} \cdot \frac{N}{t} \text{ [kgf-m]}$$

N : Revolutions per minute (rpm)
T : Torque(kgf . m)
GD² : Flywheel effect with rotor(kgf . m²)
t : Starting time(sec)

General Spec of Motor

Insulation Resistance	Test value above 100MΩ by DC500V hi-resistance meter at coil and housing after rated running at constant temperature and humidity.
Insulation Endurance	Hi-pot test by 60Hz 1.8KV for one minuate at coil and housing without damage after rated running at constant temperature and humidity.
Temperature Rise	Temperature rise below 75°C after rated running.
Ambient Temperature Range	-10°C ~ +50°C (motor with capacitor -10°C ~ +40°C)
Insulation Class	E Class (120°C)

CHOOSING A SUITABLE MOTOR

● AC SMALL GEAR - SPEED REDUCED, VARIABLE SPEED, BRAKE MOTOR

AC MOTOR				
VARIABLE SPEED	MODEL	Variable Speed Brake Motor	Reversible Variable Speed Motor	Variable Speed Induction Motor

INDUCTION MOTOR & SPEED REDUCER INSTALLATION MANUAL

1.Attention

1.1 Install preparation

- Please read this operation manual before using this motors. Any problems caused by inappropriate operation contrary with the manual, or damage caused by natural disasters, or restructure without our permission, Sesame will not take any responsibility nor will the motor / speed reducer be covered by warranty.
- Warranty is within one year after purchase. Within warranty period, if motor / speed reducer damage is not caused by operation error or by natural disaster, then please send back the product, we should replace the damaged spare part at free of charge.
- Before Installation, ensure correct voltage can be applied to motor.
- Do not bend the lead wires.
- Installation should be proceeded by trained technicians only.
- Please wire motor correctly according to the manual to prevent fire or electrical shock.
- Do not attempt to disassemble or modify the motor to prevent electrical shock or injury.

1.2 Installation Conditions

The conditions below must be fulfilled to avoid any motor damage, which is not covered under warranty.

- The motor was designed to be installed on the other facilities/applications.
- Do not expose the motor to flammable or corrosive gas.
- Indoor application only. Room temperature should be maintained between -10~50°C (-10~40°C for motor with capacitor)
- The air humidity should not exceed 85%.
- The altitude of where the motor was installed should not exceed 1000 meter above the sea level.
- Do not expose the motor to the sunshine directly. Dust and spray of oil/water is also forbidden.
- Avoid any continuous vibration or impact on the motor.
- Ensure the motor was installed in a well ventilated location.

1.3 Preparation of start up

- Please check the power supply before starting the motor.
- High temperature might cause the coil and bearing failed earlier.
- Do not connect the motor with inverter.
- Motor might be broken if wrong wiring or overloaded.

2.Installation

2.1 Round shaft model

- Mount the motor on the adapt plate by screws. Make sure the motor and the adapter were tightly mounted. (Note that screws for connecting motor and machine were not included)
- Please note that there should be no gap between motor and adapt plate.

Flange dim \square :	Screw	Tightening torque
60mm	M4	2.0 N · m
70mm	M5	2.5 N · m
80mm	M5	2.5 N · m
90mm	M6	3.0 N · m

2.2 Gear shaft model

Install motor and speed reducer by turning speed reducer left and right when gently inserting motor gear shaft into speed reducer until no gap between the mounting surfaces. Insert the screws and tighten them. No hammer or force is allowed.

★O-rings are necessary for some specific models. Please install accordingly.

★Gaskets are required when installing intermediate speed reducer.

⚠ Attention

- Metal chips/unconfirmed substance left inside speed reducer or incorrect installation will damage gears and results in abnormal noise, short lifespan or accident. Please be alert.
- Installation is available only when speed reducer and motor output shaft have the same gear type. Please confirm the specification of both products before installation.
- Specification compatibility check is required before applying both products to other machinery or equipment.
- Sesame Motor Corp. is not responsible for any cause there might occur if user's neglects of specification compatibility checking.

3. Wiring Diagrams

- The motor rotating direction was defined by looking toward the output shaft. In the forward direction for CW, reversed direction for CCW.
- 1 phase motor rotating direction change is available by switching wiring to CW. or CCW.
- 3 phases motor rotating direction change is available by switching any two wires of U, V, and W.

3.1 Induction / reversible motor

3.11 3 phases

3.12 1 phase

3.2 Brake motor

- ▶ The lining clearance will bigger than 0,3-0,35mm after a period of usage, please contact us to replace the lining.
- ▶ Isolating wiring is required when frequent braking condition.
- ▶ Brake frequency limit 10 times per minute.

3.21 3 phases brake motor with terminal box. (220V / IP54)

3.22 3 phases brake motor with terminal box. (380V~460V / IP54)

3.23 3 phases brake motor with terminal box. (460V~600V / IP54)

3.24 3 phases brake motor (220V / IP22)

3.25 3 phases brake motor (380V~460V / IP22)

3.26 3 phases brake motor (460V~600V / IP22)

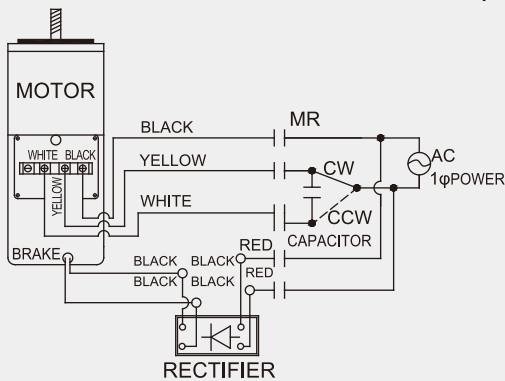

3. Wiring Diagrams

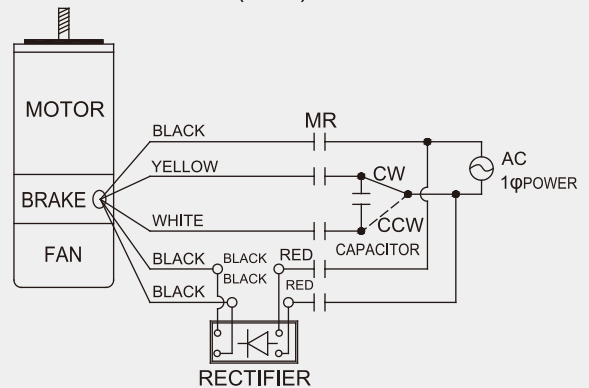

3.27
3 phases brake motor (dual voltage)

3.28
1 phases brake motor with terminal box (IP54)

3.29
1 phases brake motor (IP22)

3.3 Torque motor

3.31 Standard type

- Motor rotating direction change is available by switching wiring to CW. or CCW.
- To adjust speed and torque, an external voltage regulator is needed.

3.32 Terminal box type

- Voltage regulator is installed in terminal box. Motor speed adjust is available by attached speed controller.

Attention Before operate terminal type torque motor, please make sure correct voltage and frequency jumper on the control panel to prevent motor burning down.

3.4 Clutch brake motor

- The power supply for motor (AC) and clutch brake (DC24V) must be separated.
- The output shaft keeps rotating when switch to clutch side after power supplied. As the switch is on the brake side, the brake will stop shaft rotation and keep great holding force.
- DC power off will release the brake and hence the output shaft rotates freely.

4. Installation of Capacitor (Single Phase Motor Only)

- Ensure the capacitor matches the specification of the motor before installation.
- Install the capacitor with M4 screws (not included).
- Capacitor should be installed inside the electrical box or IP54 rated box to avoid electric shock.

Attention

- ▶ To avoid damaging on the mounting foot, the screws tightening torque should not exceed 1 N.m.
- ▶ Install capacitor at least 10 cm away from motor to prevent heat damage to capacitor.
- ▶ Connect one wire in one terminal only.

5. Thermally Protected Motor Precaution

- Single phase thermally protected motor will restart automatically when motor temperature falls below a certain level. Always turn off the power before conducting checks or performing work on the motor.
- Thermal switch of three phases motor is installed with two red wires. Please connect two red wires to control system. Thermally protected motor will restart automatically when motor temperature falls below a certain level. Always turn off the power before conducting checks or performing work on the motor.

6. Trouble Shooting Guides

Please check the motor according to procedures below if abnormal situation.

- The motor does not work or the speed cannot be raised.
 - Check if the power supply fits the motor specification?
 - Confirm if the power supply is correctly connected?
 - Confirm if the motor is overloaded?
 - Confirm if the wires are poor connected when using crimping terminal or terminal block?
 - Confirm if the capacitor is well installed?
- The motor is over heated
 - Check if the power supply fits the motor specification?
 - Check if the room temperature is under the requirement ($< 40^{\circ}\text{C}$)?
 - Confirm if the capacitor specification is correct?
- Noise
 - Check if the motor was blocked?
 - Check if a phase failure occurs?
 - Check if brake well functioning?
 - Check if the fan loosens?
- If the problem could not be solved via the procedures above, please DO NOT take apart the products, contact Sesame for technical support.

GENERAL PURPOSE MOTOR

- Continuous Rating
- High Efficiency, Low Noise
- Multifunctional
- 1 Phase: with Capacitor
- 3 Phase: Continuous Running, Suitable for Industrial Machinery

RK Series REVERSIBLE MOTOR

- Rated Time: 30 minutes
- Built-in Easy Brake System
- Frequent Forward/Reverse Usage
- Few Over Run, Minor Holding Force

REVERSIBLE MOTOR, LEAD WIRE TYPE (6W-60W)

REVERSIBLE MOTOR, TERMINAL BOX TYPE (6W-60W)

REVERSIBLE MOTOR CURVE

Notes : At 50Hz, a 4-Pole motor has synchronous turning speed of 1500rpm, 1800rpm at 60Hz.

BRAKE TORQUE & OVERRUNS

OUTPUT (W)	BRAKE TORQUE (kg.cm)	OVERTURNS (TURNS)
6	0.59	4-6
15	1.27	4-6
25	1.47	4-6
40	3.92	4-6
60	3.92	4-6

REMARKS :

- "Rated Time" indicates the time limit to which the motor must stop running after its continuous operation, and resume to run only after cooling down. Otherwise, the motor may burn down due to overheating.
- Reversible motors can also be used according to the methods shown above.

REMARKS :

- "Rated Time" indicates the time limit to which the motor must stop running after its continuous operation, and resume to run only after cooling down. Otherwise, the motor may be burn down to overheating.
- The usage of the reversible motor (terminal box type) is the same as the reversible motor (lead-wire type).

SPEED CONTROLLED MOTOR

- Easy Wiring and Speed Control
- Built-in Electronic Brake Circuits for Instant Braking
- Wide Range of Variable Speeds
- Parallel Rotation Performance
- High-Responsive and Great Stability in Speed Control
- Linkable to Other Control Systems

ASSEMBLED TYPE SPEED CONTROLLER

INSTRUCTION & PRECAUTIONS

- Power supply leads should be thicker than 0.75mm².
- Variable speed ranges from 90-1400rpm at 50Hz, and 90-1700rpm at 60Hz.
- Due to the construction of the gear motor, please reverse the CW/CCW wires when you wish to switch to an opposite rotational direction.
- The STOP and RUN switches are for short interval stops only.
If the motor must be stopped for a longer period, please turn off the power supply.

DIMENSIONS

APPLICATION OF STEPPED SPEED

Once applicable speed is decided, as speed is changed, variable electric resistance value can be fixed.

1. Parallel Type: the switch first makes contact with the connecting terminal, then returns to the original terminal point.
2. Series Type: the switch leaves the previous connecting point, then makes contact with another terminal point.

Either type is applicable, please wire accordingly. When using the parallel type switch, an open-circuit mode is created at the instant of switching, where a rapid increase of motor speed must be taken into precaution.

■ **Sequence In Parallel Resistance Value** $= \frac{R1 \times R2}{R1 + R2}, \frac{R1 \times R3}{R1 + R3}$
(MAX. 20KΩ) R

■ Sequence In Series Resistance Value (MAX. 20KΩ) $R = R1 + R2 + R3$

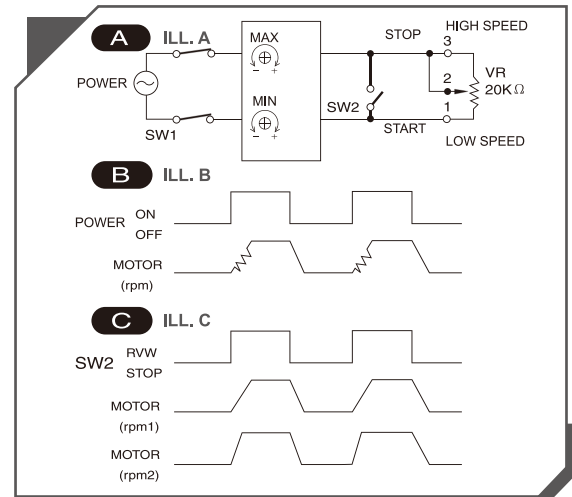

WIRING APPLICATION FOR SEPARATE TYPE CONTROLLER

HOW TO IMPROVE STARTING FEATURES ON INTERVAL USAGE

When turning on power switch (SW1) of the controller, the motor needs more time to start. The surges between ON/OFF cause motor starting speed un-steady temporarily. (see ILL. B)

On interval usage or motor is not in use for short time, please leave power connected to the controller. A better starting feature is available by controlling RUN/STOP with SW2. (see MOTOR rpm1 of ILL. C)

To get a better starting response, turn SVR on MIN. clockwise slightly (but keep the motor still stop) to raise a substitution on bias voltage from zero. (see MOTOR rpm2 of ILL. C)

THE USAGE OF SPEED CONTROL IN DC VOLTAGE

- The variable resistance used for speed control could be replaced by inputting a DC voltage. The wiring below is for application reference.
- Be cautious in application that voltage input must not exceed 8V, and the SVR of MIN. must be turned left to zero.
- Special attention to the isolation status between control signal side (V in) and power supply side (see Table 1) to avoid controller burn down and current leakage.
- Be sure to connect 220Ω, 1/2W resistor.

PARALLEL ROTATION

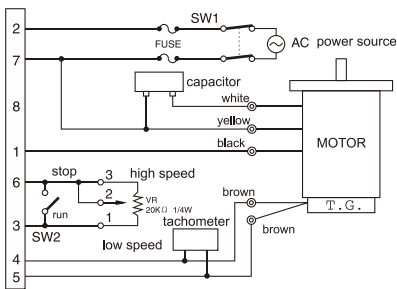

When a single variable resistance (only for SS31/SS32) or coaxial multi-variable resistances (only for SS21/SS22) are used to control several motors, the wiring of the controller are shown as below.

Speed of each motor may have minor variation due to different loading and product tolerance.

BRAKE MOTOR

CONSTRUCTION (POWER-OFF BRAKE TYPE)

Our brake motor is an excitation type motor. Once voltage is introduced into the coil, the magnet working against the spring will hold the moving plate, releasing the brake, and allowing the motor shaft to move freely.

INSULATION RESISTANCE

Tested value at 10MΩ and above, measured by DC 500V Hi-Resistance meter between the coil and housing.

HI-POT RESISTANCE

No damages caused after 1kV at 60Hz was tested for one minute between the coil and housing.

ADJUSTMENT OF THE BRAKE CLEARANCE

Brake clearance is the gap between magnetic coils and moving plate. The ideal pre-setting is 0.15mm (around the thickness of a name card). After a period of usage, the clearance is widened due to lining friction and wear. If the clearance is bigger than 0.3mm, please contact us or replace the lining.

FEATURES

HIGH BRAKING & HOLDING FORCE

Built-in excitation brake: as the power is shut off, it can stop the motor instantly and accurately holds the load, making it most suitable for emergency braking.

BRAKE PRECISION

Regardless of rpm, the magnetic brake can control the overturns within 2-3 turns, making it suitable for frequent forward/reverse operation.

Products due to human error, natural disasters or other factors lead to poor or damaged, will not be covered under warranty.

NOTES :

1. The applicable frequency for the ELECTRO-MAGNETIC INDUCTION BRAKE MOTOR should not exceed more than 10 times per minute.
2. Static friction torque of a ELECTRO-MAGNETIC INDUCTION BRAKE MOTOR is: 6W~25W: 4Kg.cm, 40W~90W: 10Kg.cm.

ELECTRONIC INSTANT BRAKE (SB Series)

■ OPERATING FREQUENCY AND LIMITATION

Although the "IN" model could be used for inch movement, a rise in temperature would result from frequent start-stop action of the motor. Please suspend operation temporarily if the surface temperature of the motor exceeds 90°C.

■ BRAKING PRINCIPLES

Electronic brake circuit is design to introduce pulsated direct current rectified by the half wave into motor, to produce directional magnetic field and stop the motor instantly. Brake current is produced by the controller and introduced into motor in a very short time only. The time frame for brake current enter into the motor (approx 0.5 seconds) is controlled by timing circuit inside the controller. No friction created between parts, therefore lifespan is extended.

■ INSTALLATION CAUTIONS.

- Apply only one electronic brake onto one motor.
- Motor wiring depends on motor output, please follow the wire diagram to make the wire connection.
- When SW1 is switched from "run" to "brake", the electronic brake is applied to stop the motor instantly.
- Be cautious about the 200 and above voltage among terminals when wiring.
- Apply industrial standard relay switch and gate switch. SB32-IN and SB32S-IN contact capacity is above AC200V, 5A.
- Wire-diagram, it is based on motor shaft point of view, as for clockwise rotate connectivity.
For conduct counter-clock rotation: 1. induction motor: yellow line and white wire on the exchange. 2. reversible motor: switch SW2 switches.
CW: clockwise CCW: counter-clockwise rotation
- For operated a reversible motor, it is require more than 0.5 second to switch its reversible mode.
- In the case of frequent braking, its external resistance will be very hot. For the installation, should pay particular attention.
- Within 0.5 seconds after motor start and operation, please do not perform reversible operation.
- To protect power connect spot from spark light when power on or off, it is required to enforce the connectivity via wire diagram such as surge absorber with CR circuit. Ro=5~200Ω (1/2W above) Co=0.1~0.2 μF(400VAC above)

SPECIFICATIONS

MODEL	VOLTAGE (V)	PHASE	BRAKE HOLDING FORCE	BRAKE PRECISION	MOTOR OUTPUT (W)	TEMPERATURE
SB31-IN	100 ~ 125	1ø Single Phase	0.5 / Second	200°	6 ~ 90	-10°C ~ +40°C
SB32-IN	200 ~ 240	1ø Single Phase	0.5 / Second	200°	6 ~ 90	-10°C ~ +40°C
SB32S-IN	200 ~ 240	3ø Three Phase	0.5 / Second	200°	6 ~ 90	-10°C ~ +40°C

■ INSULATING RESISTANCE :

Tested value at 10MΩ and above, measured by DC 500V hi-resistance meter between the coil and housing.

■ INSULATION ENDURANCE :

No damages caused after 1kV at 60Hz was tested for one minute between the coil and housing.

■ OPERATIONAL STEPS OF AN ELECTRONIC BRAKE

■ DRAWING DIMENSIONS

■ 8-PIN BASE :

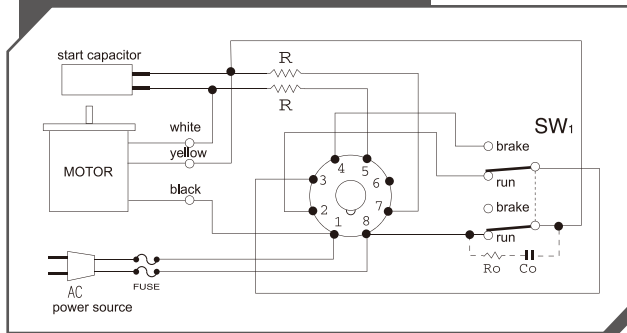

ELECTRONIC INSTANT BRAKE

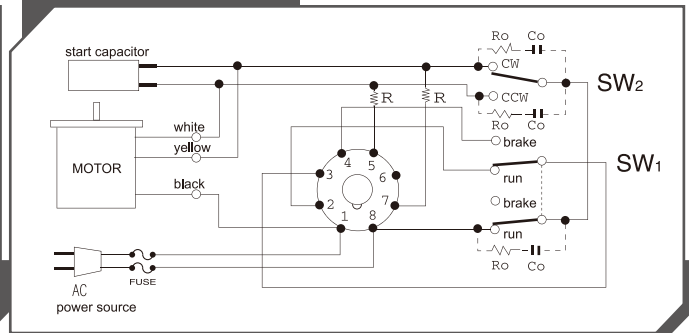

■ SB31-IN SINGLE PHASE 110~125V

■ SB32-IN SINGLE PHASE 200~240V

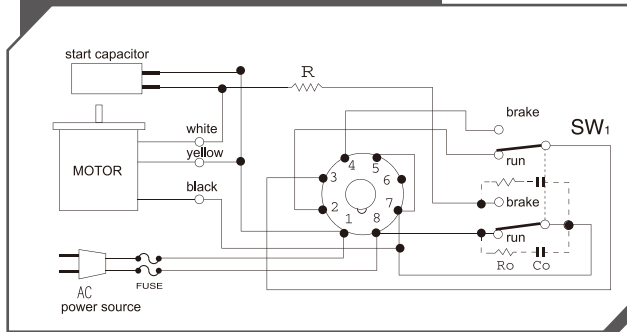

OUTPUT 6W~25W · SINGLE DIRECTION ROTATION

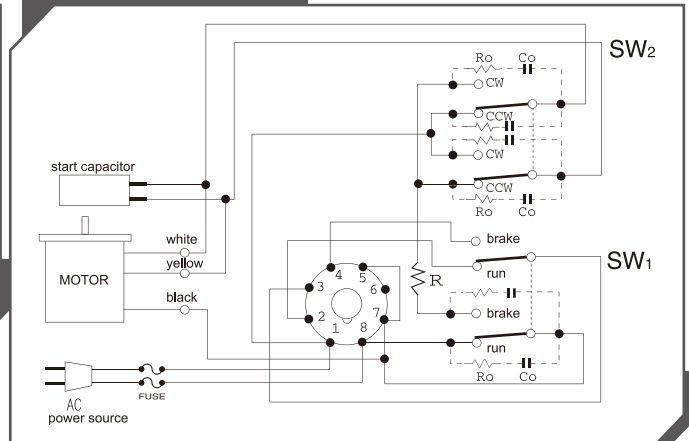

OUTPUT 6W~25W · REVERSIBLE

OUTPUT 40W~90W · SINGLE DIRECTION ROTATION

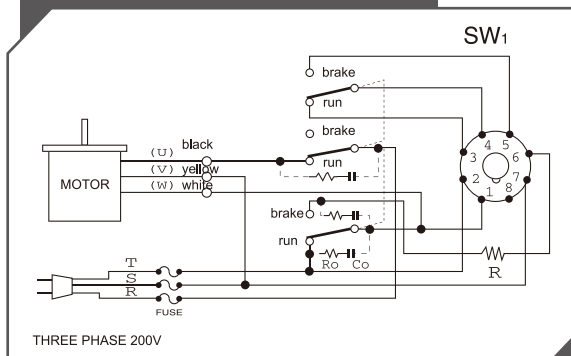

OUTPUT 40W~90W · REVERSIBLE

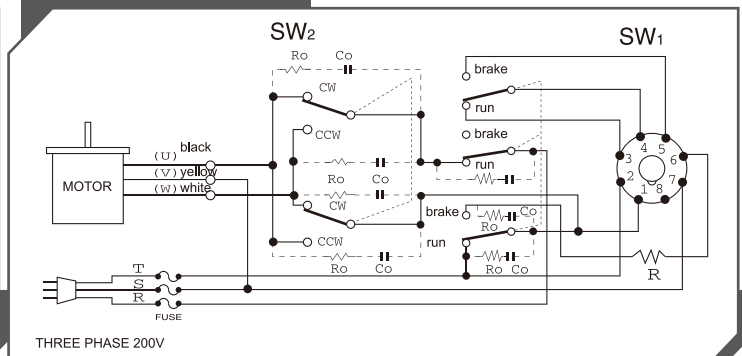

■ SB32S THREE PHASE 200~240V

OUTPUT 25W~90W · SINGLE DIRECTION ROTATION

OUTPUT 25W~90W · REVERSIBLE

■ SELECTION OF EXTERNAL RESISTANCE

- Output 6W~25W: external resistance 20W/20Ω. (Model:DDR20W20 ΩJ)
- In frequent braking situation, temperature of external resistance would be very high. please use external resistance 30W20Ω. (Model:DDR30W20ΩJ)
- Output 40W~90W: external resistance 50W/50Ω. (Model:DDR50W50 ΩJ)
- In frequent braking situation, temperature of external resistance would be very high. please use external resistance 80W50Ω. (Model:DDR80W50ΩJ)

CLUTCH BRAKE MOTOR

FEATURES

■ SUITABLE FOR HIGHLY FREQUENT START/STOP OPERATION

High precision and responsive clutch and brake are most suitable for frequent start/stop applications.

■ PRECISE POSITIONING

When the brake is in use, the clutch will separate the link from the brake, so there are no overruns, making positioning precise and accurate.

■ SIMPLE DESIGN

Adapting compact and space-saving design, making it easy to operate and looking elegant.

CONSTRUCTION OF CLUTCH BRAKER

A clutch brake is a precision clutch assembled with a brake, suitable for highly frequent start/stop operation. After adjoining with a speed reducer, it can easily accomplish actions such as positioning, inch movement and interval transportation.

■ SPECIFICATION OF THE CLUTCH BRAKER

MODELS	GK TYPE		GS TYPE	
	BRAKER	CLUTCH	BRAKER	CLUTCH
STATIC FRICTION TORQUE (kg.cm)	10	10	15	15
DYNAMIC FRICTION TORQUE (kg.cm)	7	7	10	10
RATED VOLTAGE (DC-V)	24	24	24	24
CAPACITY (AT 20°C) (W)	8	6	8	6
BRAKE FREQUENCY	Max. : 100 rounds /min			

■ INSULATING RESISTANCE :

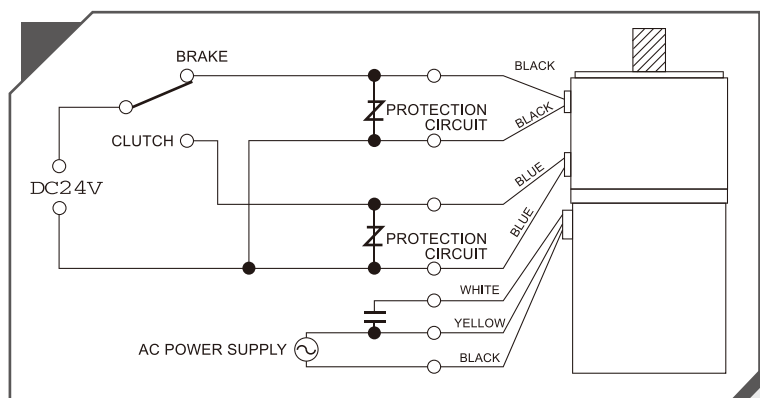

Tested value at 10MΩ and above, measured by DC 500V hi-resistance meter between the coil and housing.

■ INSULATION ENDURANCE :

No damages caused after 1kV at 60Hz was tested between the coil and housing.

WIRING OF A CLUTCH BRAKE

The power source for the motor (AC) and the clutch/brake (DC24V) must be separated. As the switch is on the clutch side when the motor is rotating, the output shaft will start rotating and transmits power accordingly. As the switch is on the brake side, it would stop instantly and hold great retention force. If the DC power is shut off, the output shaft can rotate freely.

INDUCTION CLUTCH BRAKE MOTOR

NOTES :

1. A clutch motor has great inertia according to the stop frequency and interval. When selecting a speed reducer, please calculate the feedback inertia accurately on your machine and advise us, so we can provide you the applicable model of speed reducer.
2. Instant start and stop will result in great currents, causing the temperature to rise rapidly, thus the start-stop frequency could not exceed 20 times per minute. GK model clutch brake motors have GN shafts, and GS model clutch brake motors have GX shafts.

GENERAL PURPOSE

CLUTCH BRAKE
MOTOR

TORQUE MOTOR

SPEED REDUCER

COMPONENTS

TORQUE MOTOR

CHARACTERISTICS OF THE TORQUE MOTOR

- 1 A torque motor possesses strong starting torque and sloping characteristics. Within the full range of revolution-torque curve, especially under low speed and constraint, it can rotate steadily.
- 2 The motor torque changes approximately proportion to the square of the voltage. The speed can be changed easily by varying the voltage supplied to the motor.
- 3 The torque motor is designed differently than other motors. It can obtain stable torque in low speed under a restrained condition. Suitable in force static-torque situation, or restraints mode is required when the high-speed operation is finished. Continuously operation is available at 60V, rated for short interval operation is required above 60V, and 5 minutes rated at 110V. ※When operated under the restraint mode with speed reducer, the motor output torque would increase greatly. Please do not exceed the allowable torque of the speed reducer, and NEVER strike with force to stop the motor to prevent impact damage to the speed reducer.
- 4 In an application where an object is released continuously at a constant speed and wound up with constant tension, the torque must be doubled and the speed must be halved if the diameter of the winding spool is doubled.
- 5 Within the range of the revolution-torque characteristic curve, the motor can be used as a brake when the rotating motion is in the opposite direction.

TYPES OF THE TORQUE MOTOR

REGULATOR BUILT-IN TYPE

The voltage regulator is stored inside the terminal box, where it can control the motor speed easily with the speed controller it is attached to. No need to attach the regulator on the exterior of the motor, making the installation more convenient.

STANDARD TYPE

External voltage regulator is required to adjust speed and torque.

SPEED REDUCER

■ OUTLINE & SPECIFICATION
■ UNIT : mm

HOW TO SELECT A SPEED REDUCER

■ ROTATION AND TORQUE GIVEN FROM CONJUNCTION WITH SPEED REDUCER

Following is the calculation formula:

$$\text{Rotations : } N_G = \frac{N_m}{i}$$

$$\text{Torque : } T_G = T_M \cdot i \cdot \eta$$

N_G : Rotations after conjunction with speed reducer (rpm)

N_M : Rotations of motor (rpm)

i : Ratio

T_G : Torque after conjunction with speed reducer (kg•cm)

T_M : Torque of motor (kg•cm)

η : The transmission efficiency of speed reducer

■ MAXIMUM TORQUE ALLOWED

The maximum torque a speed reducer can tolerate is limited due to materials or other specs. Please see the specification of speed reducer for maximum torque allowed at different ratio.

■ ALLOWABLE RADIAL LOAD AND AXIAL LOAD

Radial load refers to the bending load of output shaft at the 1/2 point, commonly used in units linked by chains. Radial load can be disregarded if a coupling is used. Do not over-load since radial load and axial load may affect service life and strength.

■ ADJUSTED THE SPEED REDUCER RATIO VIA ENVIRONMENT TEMPERATURE

Transmission efficiency of a speed reducer apparently does affected by the environment temperature. The graphic display the torque loss percentage at different ambient temperature (for reference only).

■ MOTOR EQUIP WITH ROUND SHAFT AND GEAR SHAFT, ONLY GEAR SHAFT CAN CONJUNCT WITH SPEED REDUCER.

■ LOAD PATTERNS VS. LIFESPAN OF SPEED REDUCER

Speed Reducer lifespan will be vary by ways of loading including but not limit to operation time frame, different type of bearing. The following table assumes that the load gear is under the maximum permissible torque. (Reference for engineers)

Unit : hrs

BEARING				BALL BEARING			
LOAD PATTERN	5 hrs/day	8 hrs/day	24 hrs/day	5 hrs/day	8 hrs/day	24 hrs/day	Application instructions
FIXED LOAD	2000	1500	1000	6250	5000	3400	Operated in one direction, such as conveyors.
SLIGHT IMPACT	1500	1250	800	4200	3400	2500	Frequent start/stop, ex. cam operation.
STRONG IMPACT	800 ~1000	700 ~1000	600 ~700	2000 ~2500	1700 ~2500	1400 ~1700	Reversible motors, instant moment reversed, with brake system in an instant brake.

Products due to human error, natural disasters or other factors lead to poor or damaged, will not be covered under warranty.

NOTES :

1. Please fill in the required speed reduction ratio in the □ (square) after the speed reducer model no.
2. Rotational speed is calculated by dividing the synchronous speed of the motor (50Hz: 1500rpm; 60Hz: 1800rpm) with the reduction ratio. Depending on total load, actual rotational speed is 2%~20% less.
3. Speed reducers marked in the highlighted areas have opposite rotational direction to the motor. Others unmarked have the same rotational direction as the motor.
4. Attention: metal chips or objects in speed reducer will result in gear damage, noise and shorten service-life when assembling with motor.
5. Please make sure that the shaft size of the motor matches to that of the accompanying reducer model before assembly, otherwise inconformity will occur.
