

**VARVEL®**  
MOTION CONTROL SINCE 1955

  
technology made in Italy

GB

**RS/RT**

Since 1955 Varvel has been making speed reducers and variators for light industry applications. Reliable partner in power transmission equipment offers also customized solutions always according to a socially responsible company values. Modularity and flexibility lead Varvel products by a unique kit form, common to all gearbox series. This feature allows distributors an easier job to set up required products in few minutes.

## Technology Made in Italy

# RS & RT

**SERVO, IEC & NEMA GEARHEADS**  
Worm speed reducers

## Servo Gearheads - RS & RT

### Product Description

#### Multipurpose mounting

Aluminium die cast (up to size 85)  
and Cast iron (from size 110 up)

#### Wormshafts

Z1 profile,  
Hardened and ground.  
Alloy steel.

#### Wormwheels

Bronze alloy cast  
onto a cast iron hub.

#### Bearings

Ball or roller types.  
Tapered roller bearings  
For heavy duty operation.

#### Input

Servo, IEC and NEMA  
motor adapters and  
Universal Flexible Coupling

#### Oil seals

Nitrile Butadiene Rubber - NBR  
as standard;  
Viton and Silicone on request.

#### Output

Hollow bore as standard;  
Single or Double solid shaft  
on request.

#### Modular attachments

Helical one stage gearbox,  
Output Flange, Torque Arm and Torque Limiter.

### Single worm gear boxes RS and RT

The worm gearboxes, RS and RT series, specifically designed for universal mounting, are manufactured with aluminium die cast housings and covers up to size 85 and cast iron from the size 110.

Torque values listed in selection tables are output torque values for the specific gearbox size, and motor powers are always referred to 1440 rpm. Please refer to comprehensive RS-RT catalogue for full technical information.

Input Viton oil seals recommended with 3000 rpm motors, and Silicone oil seals for low temperatures are fitted on request.

Gearboxes are delivered filled with synthetic long-life oil (without plugs).

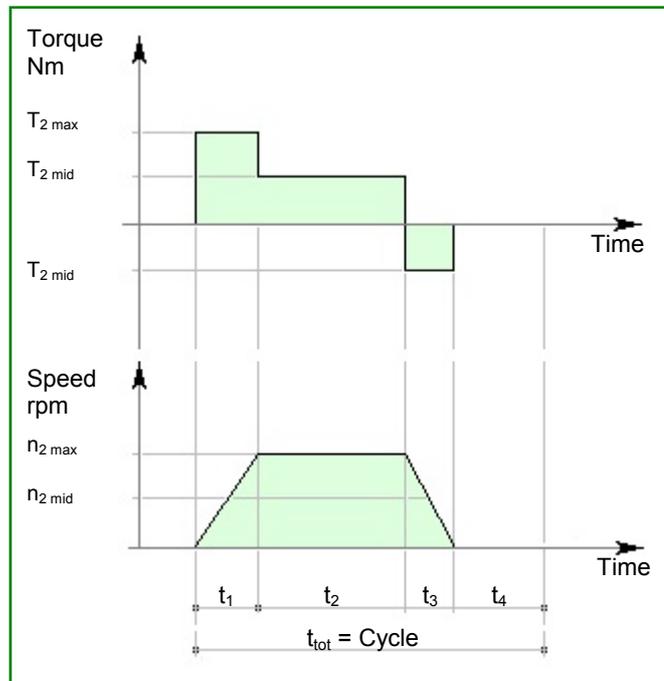

Selection table data are intended for service factor SF1.0, i.e. 8-10 running hours per day, uniform load, less than 6 start/ stops per hour, and room temperature from 15 to 35 °C (-27 to +145 °F).

## RS & RT - Servo Gearhead

### Duty Cycle

#### Duty Cycle

Actual duty cycle investigation is the basic rule in servo gearhead selection. A basic operational duty cycle can be pictured as follows:

where:

- $n_{2\ max}$  [ rpm ] - Max. speed
- $n_{2\ mid}$  [ rpm ] - Average speed
- $t_1$  [ s ] - Acceleration time
- $t_2$  [ s ] - Working time
- $t_3$  [ s ] - Deceleration time
- $t_4$  [ s ] - Pause time
- $T_{2\ max}$  [ Nm ] - Max. acceleration torque
- $T_{2\ mid}$  [ Nm ] - Working torque
- $T_{2\ dec}$  [ Nm ] - Deceleration torque

The duty cycle fixed up, then operation has to selected as:

- **Continuous (S1)** - if  $S_p > 60\%$   
- or  $S_t > 20$  minutes

or

- **Intermittent (S5)** - if  $S_p < 60\%$   
- or  $S_t < 20$  minutes

where:

- $S_p$  - per cent duty time
- $S_t$  - duration duty time
- min - minutes

$$S_p = \frac{t_1 + t_2 + t_3 + t_4}{t_{tot}} * 100 \quad [\text{Nm}]$$

$$S_t = \frac{t_1 + t_2 + t_3 + t_4}{60} \quad [\text{min}]$$

## Servo Gearheads - RS & RT

### Duty Cycle

#### Continuous duty - S1

Duty is meant continuous when per cent working time is greater than 60%, or duration longer than 20 minutes. In such cases, gearbox selection is made according the formulas:

$$T_{2 \text{ nom}} = \frac{T_{1 \text{ nom}} * i * \eta}{0.65}$$

$T_{2 \text{ nom}}$  must be

$$T_{2 \text{ nom}} > T_{2 \text{ ISO}}$$

$$n_{2 \text{ eqv}} = n_{2 \text{ nom}}$$

and also  $n_{2 \text{ eqv}}$

where:

$T_{2 \text{ nom}}$  [ Nm ] - Nominal output torque

$T_{1 \text{ nom}}$  [ Nm ] - Nominal motor torque

$T_{2 \text{ ISO}}$  [ Nm ] - Nominal output torque according to ISO 6336

$n_{2 \text{ eqv}}$  [ rpm ] - Equivalent speed resulting from single speeds coming from duty cycle

#### Intermittent duty - S5

Duty is meant intermittent when per cent working time is lower than 60%, or duration shorter than 20 minutes. In such cases, gearbox selection is made according the formulas:

$$T_{2 \text{ acc}} \geq T_{1 \text{ acc}} * i * f_s * \eta$$

$$Z_h \geq \frac{3600}{t_1 + t_2 + t_3 + t_4}$$

$$T_{2 \text{ eqv}} = \sqrt[3]{\frac{T_{2 \text{ max}1}^3 * n_{2 \text{ mid}1} * t_1 + \dots + T_{2 \text{ max}n}^3 * n_{2 \text{ mid}n} * t_n}{t_1 * n_{2 \text{ mid}1} + \dots + t_n * n_{2 \text{ mid}n}}} \quad [\text{Nm}]$$

$$n_{2 \text{ eqv}} = \frac{n_{21} * t_1 + \dots + n_{2n} * t_n}{t_1 + \dots + t_n} \quad [\text{rpm}]$$

where:

$T_{2 \text{ acc}}$  [ Nm ] - Max. output acceleration torque

$T_{1 \text{ acc}}$  [ Nm ] - Max. input acceleration torque

$i$  - Reduction ratio

$f_s$  - Shock factor ([see overleaf](#))

$\eta$  - Gearbox efficiency

$Z_h$  - Cycle number per hour

$t_1, t_2, t_3, t_4$  [ s ] - Acceleration, working, deceleration, pause times

$T_{2 \text{ eqv}}$  [ Nm ] - Equivalent torque resulting from single torques coming from duty cycle

$T_{2 \text{ max}}$  [ Nm ] - Max. torque

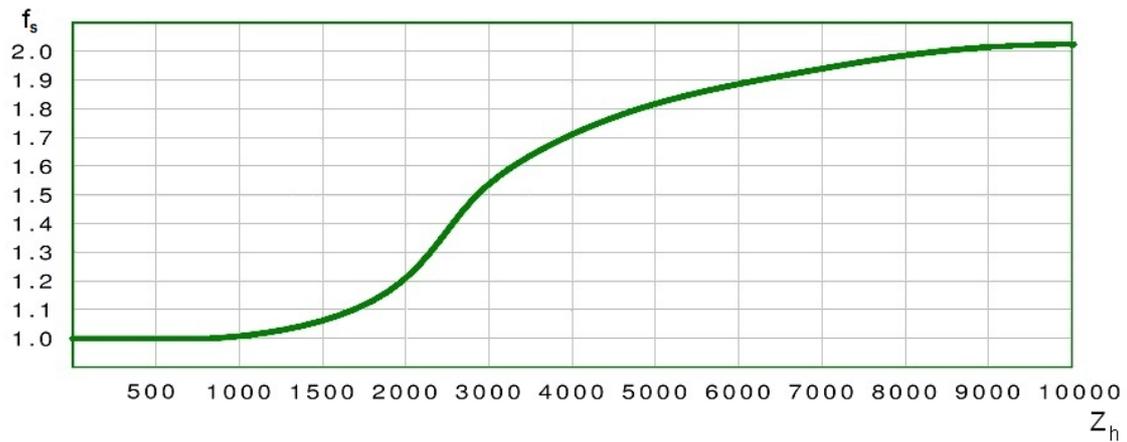

$n_{2 \text{ mid}}$  [ rpm ] - Average speed

## RS & RT - Servo Gearhead

Duty Cycle

### Shock Factor

Shock factor is a service factor keeping into account rapid motion inversions associated with quick acceleration times; it is very important to consider this service factor when sizing the gearbox.

$f_s$  - Shock service factor  
 $Z_h$  - Number of cycles per hour

# Servo Gearheads - RS & RT

## Flexible Coupling

### Reducer half-coupling

- Material: steel 20MnCr5
- Input shaft built-in
- Two bearing set
- Unchanged casing dimensions

### Spider

- External tooth connection
- Material: Thermoplastic Elastomer
  - Elastollan<sup>®</sup> TPU - Polyurethane
  - Hytrel<sup>®</sup> TPE - Polyester
- Hardness
  - TPU 98 Shore A
  - TPE 72 Shore D
- Temperature
  - TPU -20/+75°C (-4 / +167°F)
  - TPE -30/+100°C (-22 / +212°F)

### Motor half-coupling

- Material:
  - Aluminium die cast (G3, G5, G6)
  - Steel 36SMnPb14 (GS8)
  - Steel C43 on demand (GS3, GS5, GS6)
- Dynamic balancing
- Fitting:
  - Clamp (G3, G5, G6)
  - Key (GS3, GS5, GS6, GS8)
- Bores
  - IEC 72 / N42948:  $\varnothing 9$  to  $\varnothing 28$
  - NEMA C and TC:  $\varnothing 3/8$ " to  $\varnothing 1-1/8$ "

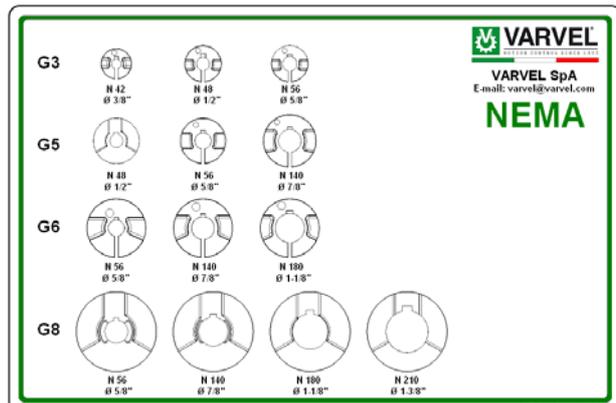

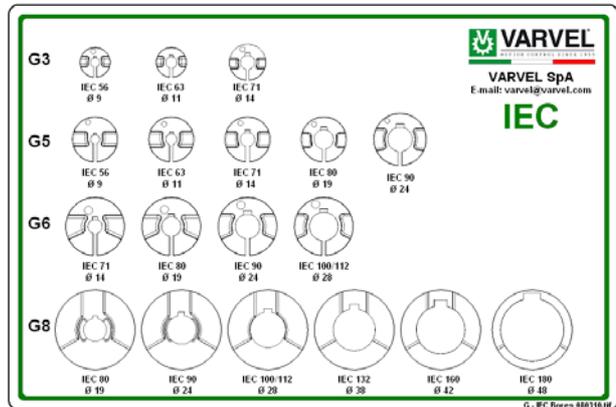

### Advantages:

- One gearbox only at input for each reduction ratio
- Greater flexibility
- Increased stock rotation
- Fretting corrosion elimination between key and keyway
- Zero backlash in gearbox/motor connection
- Allowed angular misalignment 1° max
- Torsional rigidity
- High vibration damping

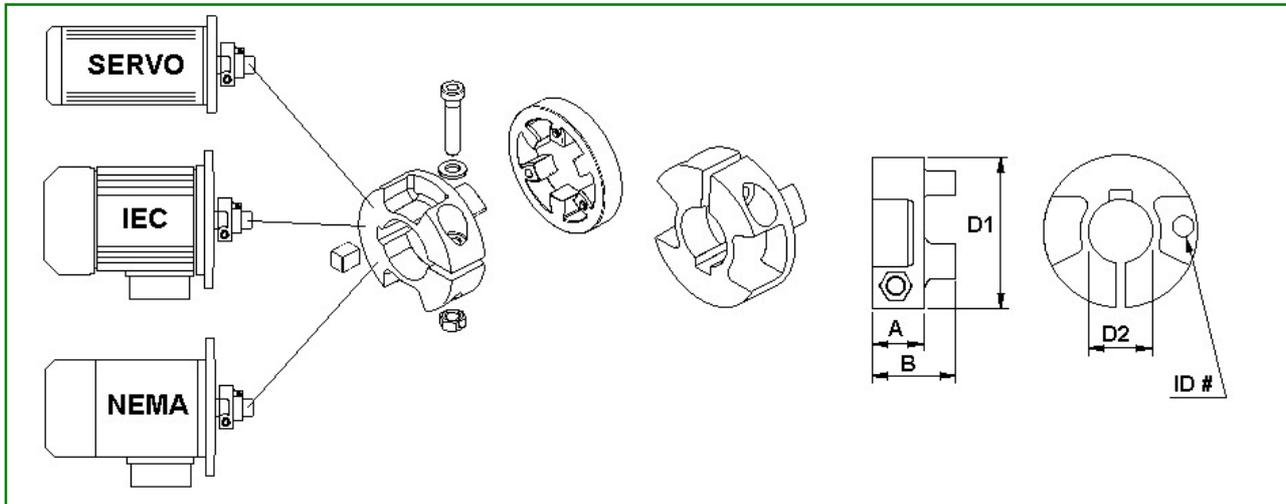

### Input flanges:

- Material:
  - Aluminium up to IEC112 and NEMA TC180
  - Cast iron from IEC 132 and NEMA TC200
  - Mainly aluminium for Servo: ask for confirmation

#### OPTIONS

- AS/AD** - Single / double sided solid output shaft
- BR/BRV** - Plain / Vulkollan-bush torque arm
- CS** - Not standard output bearings
- F** - Additional output flange
- GRM** - Reduced end play
- LNS** - Not standard lubrication
- TLE/TLI** - Internal / external torque limiter
- VB** - NDE (not drive end) worm shaft extension

Unless otherwise requested, the fitting side of output flanges and optional items is as standard the right side of the gearbox when seen from input.

#### NOTES

**Self-locking units** (with lead angle lower than 3 degrees) may become reversible under load vibrations.

**Efficiency values** are achieved after a running-in period of 30 hour full load operation.

**Spacer adapter** is supplied together with some input motor flanges according to motor shaft dimensions.

# RS & RT - Servo Gearhead

Electronic Catalogue

Modularity and flexibility have been leading the design of Varvel products since 2000.

The gearbox-kit concept was carried out allowing anyone to assemble the unit in a few minutes with standard tooling.

This feature provides the highest flexibility to Varvel's distributors and resellers who - thanks to a limited kit selection - are able to immediately configure the required product.

VARSIZE® selection programme, available from our site

[www.varvel.com](http://www.varvel.com)

allows easy sizing selection from the Varvel product range.

## 2D/3D Drawings

A guided selection allows 2D/3D models to be downloaded for the most popular CAD systems.

## Guided selection

This service returns a list of applicable product configurations upon a given sequence of application parameters (power, output torque, rpm, service factor etc.); a PDF data sheet featuring performance data and dimensional drawings is generated for each configuration, as well as the 3D model and 2D drawings .

## Servo Gearheads - RS & RT

### Back-Driving and Self-Locking

When back-driving a worm gear set using the worm wheel as input, efficiency is lower than forward-driving and, by varying design data, back-drive efficiency can be reduced to zero, so obtaining self-locking or irreversible gear set.

When back-driving the worm gear, internal friction tends to lock gearing mesh, and the bigger applied torque is, the more mesh friction increases proportionally and increasing lockage at the same time.

The most obvious example is during braking or slowing-down where inertial load will try to back-drive the worm shaft.

A worm gear is intended a self-locking device when its lead angle is less than friction angle (arc tangent of friction coefficient).

Tooth contact is dynamic even when mesh velocity is zero, as vibrations in a non-rotating gear set can induce motion in tooth contact area.

To provide a safety factor, a 3° lead angle is at least recommended for full self-locking condition, and 10° lead angle for poor self-locking condition (reversible gear set), according to relation table between lead angles  $\beta$  and ratios  $i$ .

Lead angle	Static self-locking
$\beta > 20^\circ$	Full back-driving
$10^\circ < \beta < 20^\circ$	High back-driving
$5^\circ < \beta < 10^\circ$	Good back-driving Poor self-locking
$3^\circ < \beta < 5^\circ$	Poor back-driving Good self-locking
$1^\circ < \beta < 3^\circ$	Full self-locking

$m_x$  = Axial module       $\beta$  = Lead angle (rh)      20° = Pressure angle

To the scope of intensifying our commitment to society, Varvel since 2004 started an ongoing support programme with three non-profit institutions: UNICEF (United Nations Children's Fund), MSF (Médicins sans Frontières) and ANT (National Cancer Association). Environmental respect and protection are also part of Varvel's values and this is why Varvel certified in 2001 its Environmental System to standard UNI EN ISO 14001.

## A socially responsible company
